

Healthcare Dashboard Project Documentation

Project Overview

This project is an interactive Healthcare Dashboard developed in Power BI to monitor hospital operations and patient service performance. It provides a centralized view of appointments, patient waiting times, doctor performance, and no-show rates.

Business Problem

Hospital management relied on manual Excel reports, making reporting slow and difficult. The objective was to create a single dashboard that helps management monitor patients, appointments, waiting times, and operational efficiency.

Tools & Technologies Used

Power BI, Power Query, DAX, Excel/CSV Files.

Dataset Information

The dataset contains Patient Details, Appointment Records, Doctor Information, Department Data, Wait Time, and No-Show Status.

Data Cleaning & Transformation

Removed null values and duplicates, corrected data types, standardized department names, and created calculated columns using Power Query.

Dashboard KPIs

Total Departments, Total Patients, Total Doctors, Total Appointments, and Average Wait Time.

Dashboard Visuals Explanation

- Average Wait Time by Department: Identifies departments with longer waiting times.
- Average Wait Time by No-Show Risk: Analyzes whether longer waiting times contribute to patient no-shows.
- Doctor Level Matrix: Displays doctor-wise appointments, average consultation duration, no-show rate, and available hours.
- No-Show Rate Gauge: Compares actual no-show percentage against the target.
- Interactive Slicers: Doctor, Department, and Date filters for dynamic analysis.

DAX Measures

Avg Wait Time = AVERAGE(Appointments[Wait_Time])

No Show Rate = DIVIDE(COUNTROWS(FILTER(Appointments, Appointments[Status]="No Show")), COUNTROWS(Appointments))

Business Impact

Helps reduce patient waiting time, improve doctor scheduling, monitor no-show trends, improve operational efficiency, and support data-driven decision making.

Key Learnings

Enhanced skills in Power BI Dashboard Development, Power Query, DAX Calculations, KPI Design, Healthcare Data Analytics, and Interactive Reporting.
